SUMMARY

I'm a Software Developer with 3+ years of experience, both academic insights and professional application in full-stack development. One project I'm particularly proud of is a Management App that boosted a client's operational speed by up to 90%. Currently expanding my expertise in Agentic and Generative AI.

EDUCATION

Bachelor of Computer Science in Information Systems for Business

July 2025

Universitas Ciputra Surabaya

WORK EXPERIENCE

Full-stack Developer

January 2025 - April 2025

SinarBiz

Indonesia • Contract

- Architected a secure backend API that achieved an average 50ms response time, providing the high-speed foundation necessary to slash business operational time by 90%.
- Revamped the primary user interface using responsive design and asynchronous data fetching, which eliminated loading delays and significantly improved task completion efficiency for users.
- Accelerated the company's financial administration process by 90% by developing a full-stack solution that automated manual data entry and streamlined approval workflows.

Front-end Developer

October 2024 - January 2025

Asshofa

Surabaya, Indonesia • Contract

- Enhanced user productivity on the internal ERP platform by implementing data pre-fetching with React Router v6, cutting page load times by 10%.
- Achieved top-tier web performance by optimizing the ERP interface, scoring 90+ across all Google Lighthouse benchmarks (Performance, Accessibility, SEO, Best Practices) and creating a measurably fluid user experience.

iOS & Full-Stack Developer

March 2024 - December 2025

Apple Developer Academy@UC

Indonesia • Full-time

- Spearheaded the development of the Visionale AI camera, architecting a new system that boosted image processing performance by 40% and enabled real-time, AI-driven visual effects.
- Engineered a low-latency, real-time multiplayer system for the Dreadscape game using Multipeer Connectivity, establishing the core feature for user engagement by supporting synchronous gameplay across multiple devices.

PROJECT

Openmerce

- Engineered using **SvelteKit**, **Typescript**, and **NodeJS** (for SSR Data Fetching and Prefetching), resulting in 100 scores on all Lighthouse benchmarks.
- Designed with **TailwindCSS** and **SkeletonUI**, made fully responsive UI on all devices.
- Integrated with **Payment gateway (Midtrans)** with callback functionality on sandbox environment.
- Comes with Admin app to manage products, transactions, stocks, and many more! (<https://github.com/CologneX/openmerce-staff-sveltekit.git>)

Technologies: TypeScript, SvelteKit, Azure VM, Postman, Node.js, TailwindCSS, Midtrans (Payment Gateway)

[View Repository](#)

Debty

- Utilizes **Google's Firebase** and **Apple Push Notification System (APNS)** to deliver real-time notification.
- Backend uses **Supabase (PostgreSQL)**, leveraging **Supabase Edge Function (NodeJS)** to deliver notification from Supabase to **Firebase Cloud Messaging (FCM)**.
- Injecting Text-to-speech service to notification, enabling to speak the contents of the notification.
- Using **MVVM** architecture pattern, enhancing code organization and maintainability.

Technologies: SwiftUI, Firebase, APNS, PostgreSQL, Supabase, NodeJS

[View Repository](#)

Dreadscape

- Configured CI/CD pipeline for automated testing and deployment to Apple's TestFlight platform.
- Built real-time peer-to-peer game synchronization using Apple's GameKit with 6-digit session locking system.
- Integrated 3D assets and implemented core game logic with state management.

Technologies: GameKit, Swift, SwiftUI, SceneKit

[View Repository](#)

Cuevision

- Developed camera capture architecture and user interface for real-time ball tracking.
- Collected and labelled billiard balls image dataset, then Fine-tuned pre-trained YOLOv8 base model and processing pipeline for accurate billiard ball position detection.

Technologies: SwiftUI, Swift, YOLOv8, Roboflow, CoreML, AVFoundation

[View Repository](#)

GGLIBRARY

- Core features: User authentication system (login, register, logout)
- Complete book management (CRUD operations, stock tracking)
- Book borrowing system with user-specific history
- Automated daily scheduler for loan status updates

Developed for Programmer Certificate of Competence (Government of Indonesia certification).

Technologies: NextJS, MySQL, Prisma, Docker, TailwindCSS, TypeScript, FramerMotion, NextUI

[Live Demo](#)

Asshafa ERP

- Designed responsive interface for desktop and mobile platforms, improving user engagement and satisfaction.
- Implemented on-demand PDF generation with optimized print layouts.
- Utilized Agile methodology with Kanban boards for rapid development cycles and client collaboration.

Technologies: TypeScript, React, Postman, TailwindCSS, Shadcn, Git

Unfold

- Create and manage CV and portfolio with zero cost and minimal effort.
- Built responsive interface with intuitive user experience for seamless content management.

Technologies: TypeScript, React, Node.js, Shadcn, NextJS, Git, TailwindCSS
[View Repository](#) • [Live Demo](#)

Visionale

- Led technical team to deliver AI-powered camera application on schedule.
- Evaluated and selected optimal frameworks and technologies for development requirements.
- Refactored entire codebase using Protocols and Dependency Injection, achieving 40% performance improvement and reduced resource consumption on iPhone 14 Pro.

Technologies: Swift, SwiftUI, YOLOv8
[View Repository](#)

SinarBiz

- Developed and deployed full-stack management application with real-time data processing.
- Delivered project on schedule with zero delays through efficient project management.
- Increased client operational efficiency by 90% through streamlined workflow automation.

Technologies: React, TypeScript, Golang, AWS, PostgreSQL, Redis, Nginx, Shadcn
